

# ISEWS: A Proactive Command Centre for Aadhaar

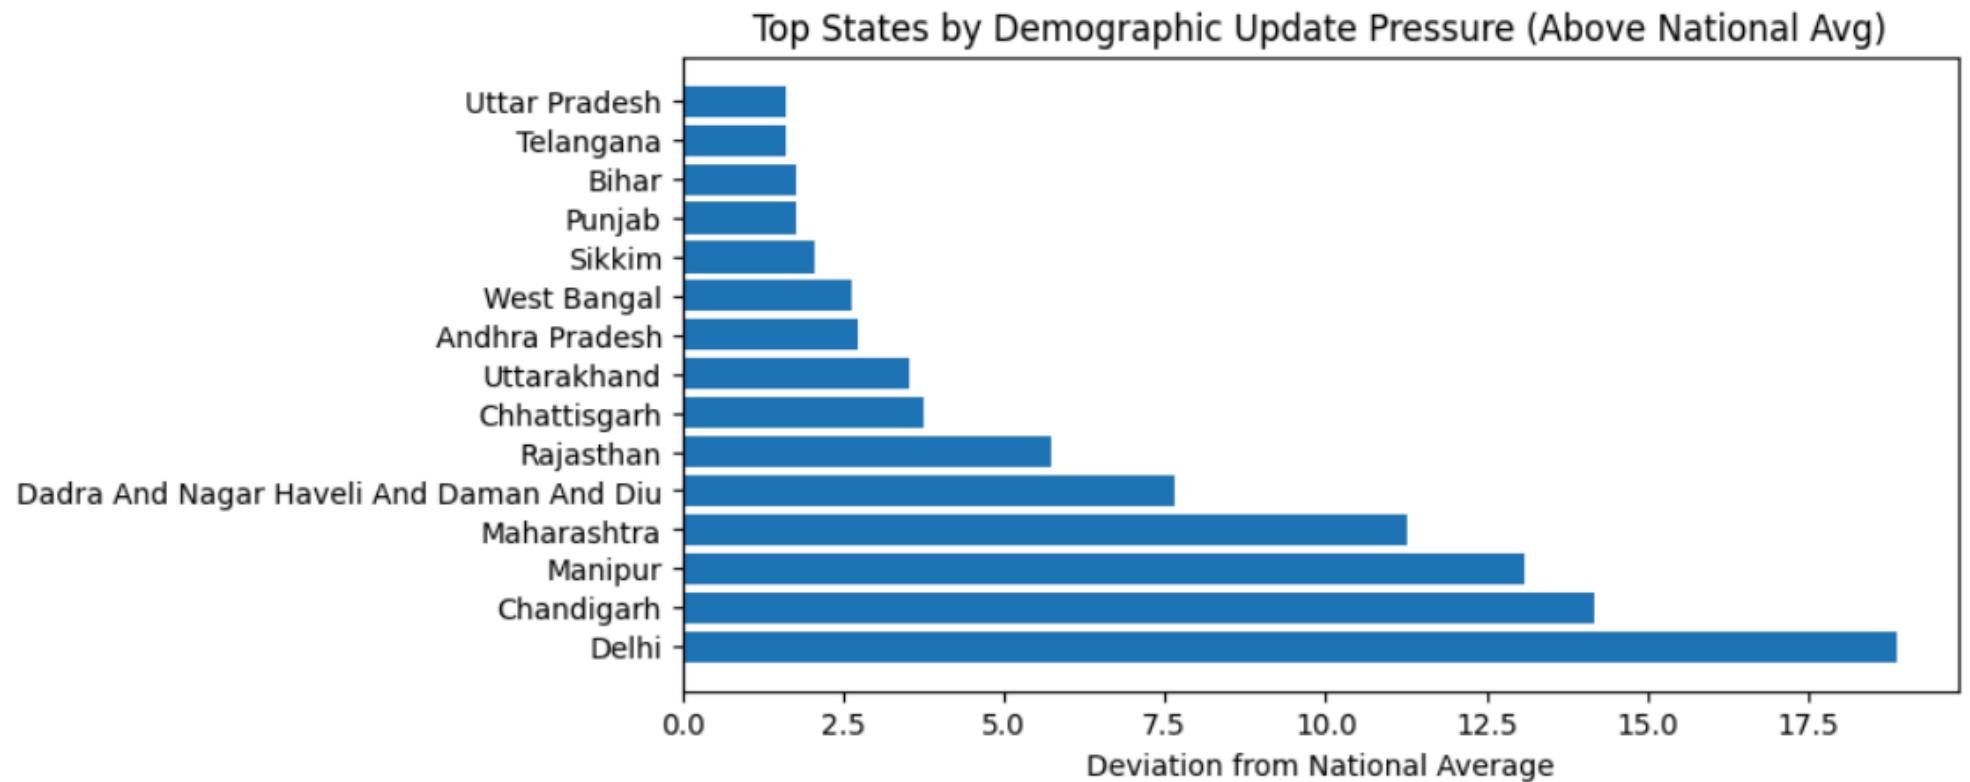

Transforming raw transaction logs into a live decision-support tool for UIDAI administrators.

## The Signal: National Aadhaar Update Pressure

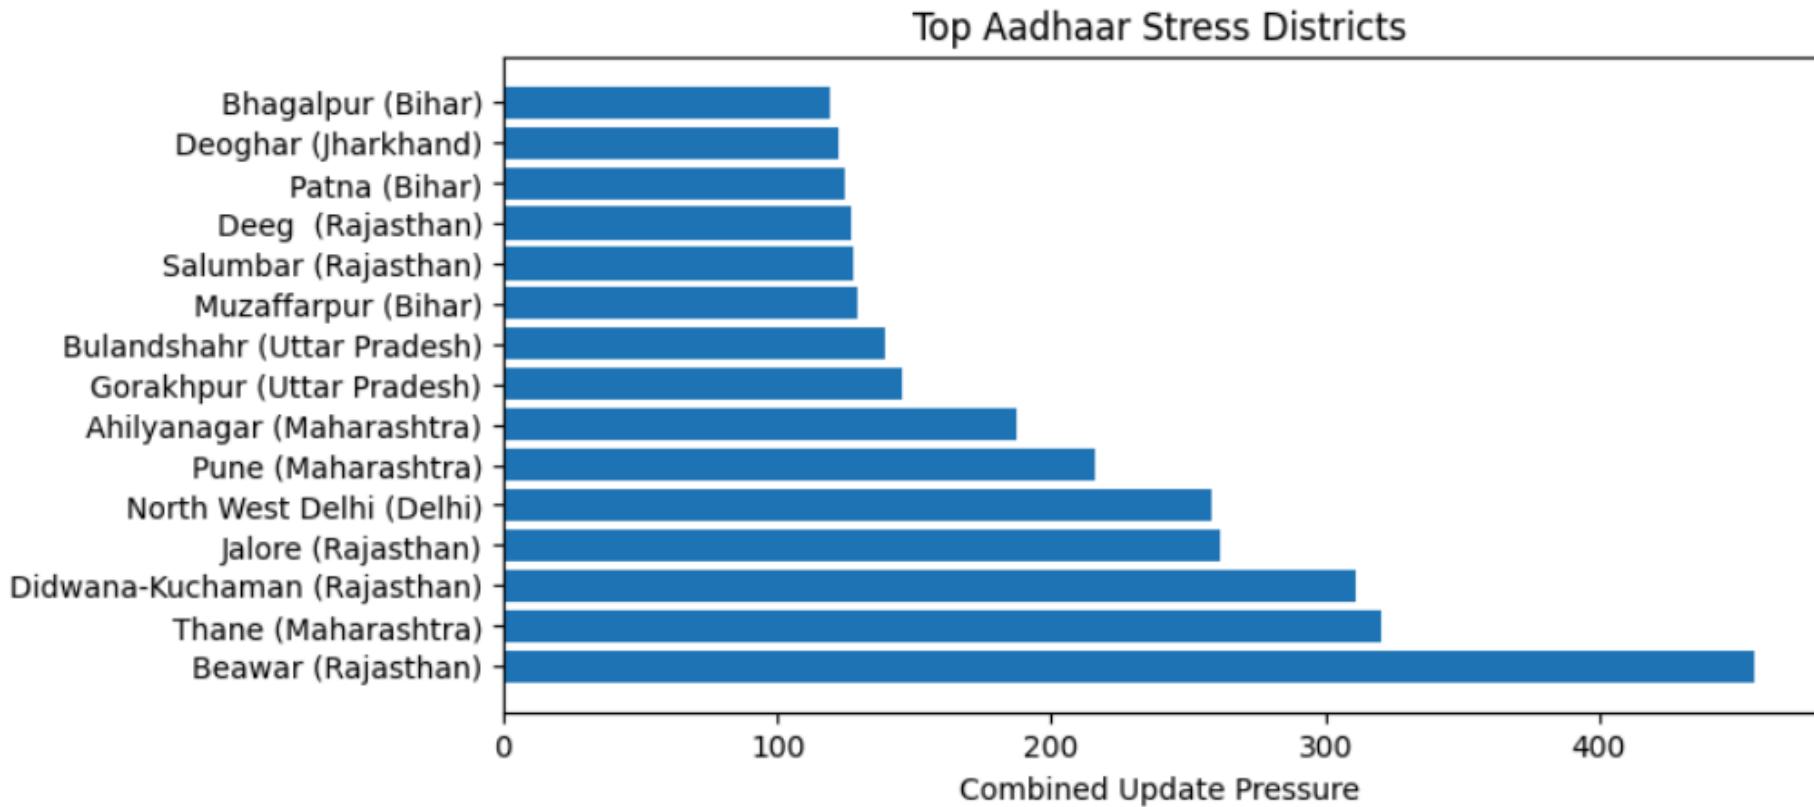

**Monitoring how identity updates evolve over time to anticipate system-wide demand.**

## Identifying Regional Imbalances

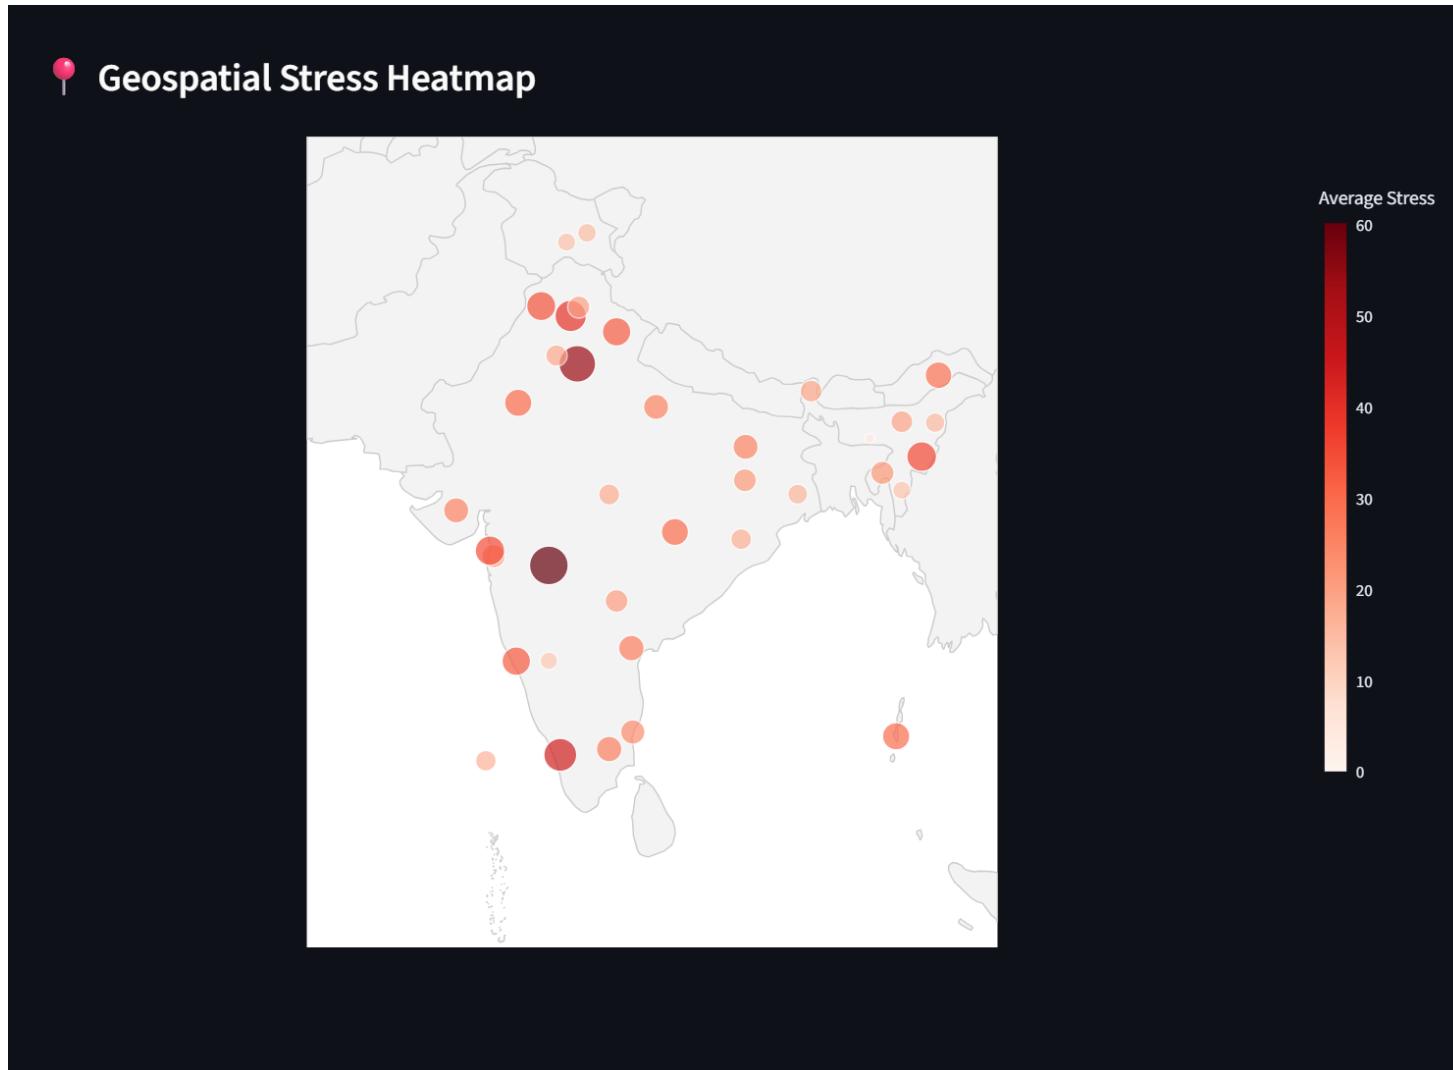

**Detecting which states consistently exceed national baselines for demographic churn.**

## Precision Targeting: High-Stress Districts

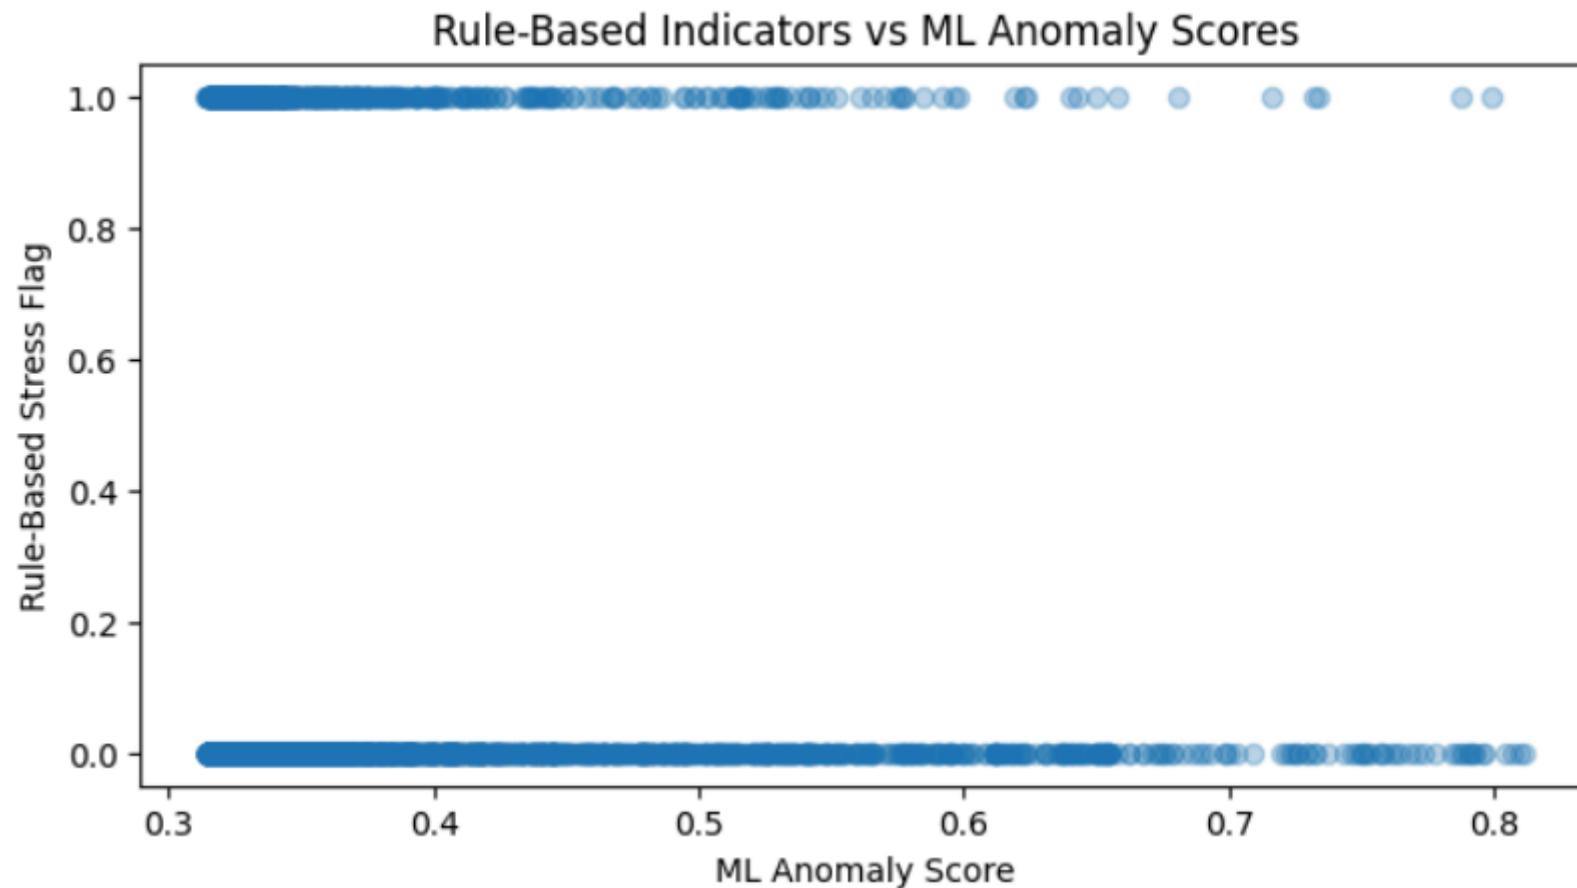

**Identifying localized "hotspots" like Beawar and Thane where operational intervention is needed most.**

# Mapping Identity "Stress Belts"

Visualizing how migration corridors and population mobility drive update frequency across India.

## Machine Learning-Powered Prioritization

Using Isolation Forest models to rank anomaly severity and validate explainable rule-based signals.
